

Fluon® ETFE FILM for Catalyst Coated Membrane Production

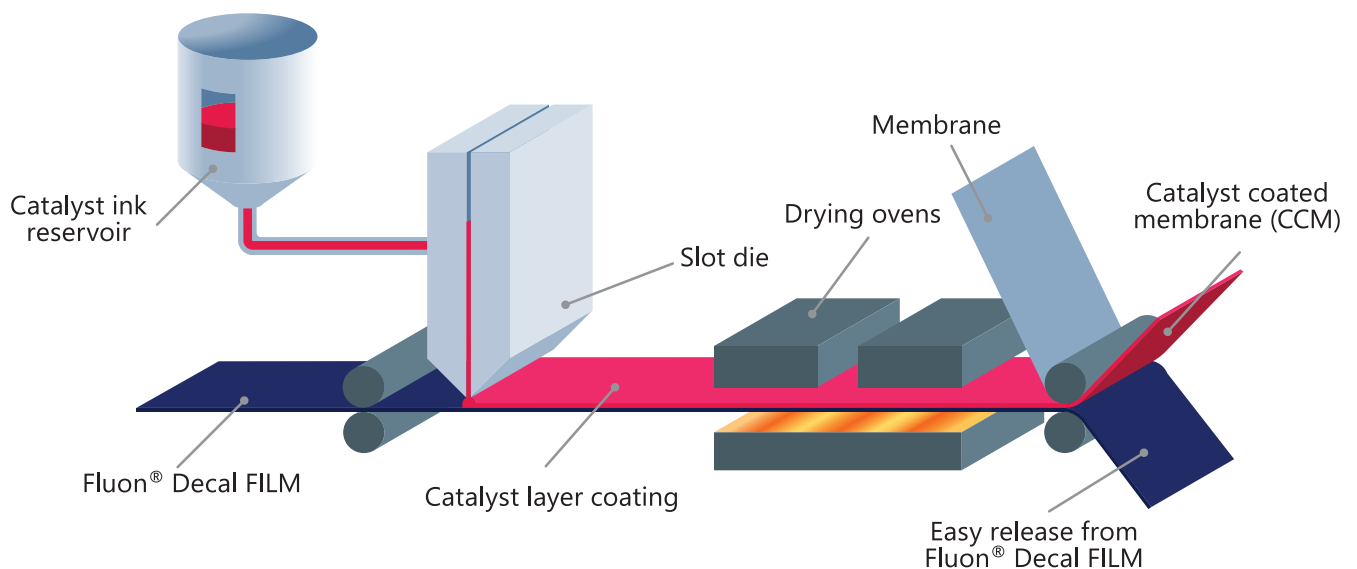

High-Performance Materials for Consistent Quality

Fluon® ETFE FILM for Catalyst Coated Membrane (CCM) Production

Along with high quality raw materials, production of CCMs also requires a consistent and reliable substrate on which to form and print the membrane.

Fluon® ETFE FILM offers the following properties and benefits to maximise efficiency in CCM production:

- Excellent releasability and smooth surface
- Outstanding decal film thickness control
- Film surface compatible with wide range of solvents
- Low shrinkage / hysteresis
- Rolls can be slit to desired width and are available on 3" and 6" cores
